

## CL219 - Database Systems Lab

### Assignment 01: Basic SQL

**Due Date:** Sunday, April 11<sup>th</sup>, by 11:59PM

#### Objectives:

In this assignment, your understanding and grasp of basic SQL statements will be tested.

#### Submission Instructions:

Assignments are to be done individually. No late assignments will be accepted.

Submissions that do not comply with the specifications given in this document will not be marked and a zero grade will be assigned.

You only have to submit a txt file, with your university ID as the file name (eg, if your ID is 19i-1234, your file name becomes i191234.txt). The file will consist of only the queries. By no means will you show the result in the txt file. Simply place 'Q1' at the head of the file, and in the next line, your query in MULTIPLE LINES. Each main clause should be on a new line. Then after giving a space of one empty line, repeat pattern for 'Q2' and so on. NOTE, do not add the quotation marks for Q1, Q2, etc. See sample solution at the end of the document for clarification.

#### Task:

You have to provide appropriate SQL for the following questions using the HR database (as practiced in lab):

1. The HR department has requested a report of all employees and their job IDs. Display the last name concatenated with the job ID (separated by a comma and space) and name the column Employee and Title.
2. The HR department needs to find high-salary and low-salary employees. Display the last name and salary for any employee whose salary is not in the range of \$5,000 to \$12,000. Label the columns Employee and Monthly Salary, respectively
3. Display all employee last names in which the third letter of the name is "a".
4. Display the last names of all employees who have both an "a" and an "e" in their last name.
5. Display the last name, job, and salary for all employees whose jobs are either those of a sales representative or of a stock clerk, and whose salaries are not equal to \$2,500, \$3,500, or \$7,000.
6. The HR department needs a report to display the employee number, last name, salary, salary increased by 15.5% (expressed as a whole number, and labeled as "New Salary"), and a column for the difference between the new and old salaries (label this column as "Increase") for each employee.
7. Write a query that displays the last name (with the first letter in uppercase and all the other letters in lowercase) and the length of the last name for all employees whose name starts with the letters "J", "A", or "M". Give each column an appropriate label. Sort the results by the employees last names.

Computer Science Department

8. The HR department wants to find the duration of employment for each employee. For each employee, display the last name and calculate the number of months between today and the date on which the employee was hired. Label the column as MONTHS\_WORKED. Order your results by the number of months employed. Round the number of months up to the closest whole number.
9. Create a query to display the last name and salary for all employees. Format the salary to be 15 characters long, left-padded with the \$ symbol. Label the column as SALARY.
10. Create a query that displays the first eight characters of the employees last names and indicates the amounts of their salaries with asterisks. Each asterisk signifies a thousand dollars. Sort the data in descending order of salary. Label the column as EMPLOYEES\_AND\_THEIR\_SALARIES.
11. Display each employees last name, hire date, and salary review date, which is the first Monday after six months of service. Label the column REVIEW. Format the dates to appear in the format similar to "Monday, the Thirty-First of July, 2000".
12. Using the CASE function, write a query that displays the grade of all employees based on the value of the column JOB\_ID, using the following data:

<i>Job</i>	<i>Grade</i>
AD_PRES	A
ST_MAN	B
IT_PROG	C
SA_REP	D
ST_CLERK	E
None of the above	0

13. Write a query to display the number of people with the same job.
14. Find the difference between the highest and lowest salaries per department. Label the column DIFFERENCE.
15. Create a query to display the job, the average salary for that job based on department number, and the total salary for that job, for departments 20, 50, 80, and 90, giving each column an appropriate heading.

## Honor Policy:

This assignment is a learning opportunity that will be evaluated based on your ability to think in a group setting, work through a problem in a logical manner and complete a task on your own. You may however discuss verbally or via email the assignment with your classmates or the course instructor, but you are to write the actual task for this assignment without copying or plagiarizing the work of others. You may use the Internet to do your research, but the written work should be your own. Plagiarized tasks or code will get a zero. If in doubt, ask the course instructor.

## Sample Submission:

 i191234.txt - Notepad

File Edit Format View Help

---

Q1.

```
SELECT last_name, salary  
FROM employees;
```

Q2.

```
SELECT *  
FROM employees  
WHERE department_id=90 AND salary < 9000  
ORDER BY last_name;
```

Q3.

```
SELECT department_id, COUNT(*)  
FROM employees  
GROUP BY department_id  
HAVING COUNT(*) < 2
```
